Public Lecture

The World’s Fastest Satellite Internet Connection at NTU

Witness how we achieve high data rate for communication anywhere, anytime! Using a very small aperture terminal we demonstrate a high speed internet connection through the WINDS satellite. For this lecture, three locations in Singapore, Japan and Korea are linked up by high speed video conference via satellite. Live telecasts of presentations from the three countries on the WINDS satellite system and its applications are followed by interactive Q&A sessions with the audience. A high definition video of the moon’s surface is broadcast as part of the demonstration.

**Date:** 13th October 2009

**Time:** 2pm to 4pm (Singapore time)  
3pm to 5pm (Japan/Korea time)

**Venue:** ADM Auditorium  
Level 2, 81 Nanyang Drive  
School of Art, Design and Media  
NTU, Singapore.
